# Webfont Features Demo

**Note:**

**This page will only display properly in new versions of Mozilla Firefox. Also, Graphite must be enabled. See the instructions on how to enable Graphite in Firefox.**

Awami Nastaliq is a Graphite-enabled font that supports the Nastaliq style of Arabic script. This page demonstrates the use of .woff fonts (using Awami Nastaliq) on a web page. This page will only display properly in new versions of Mozilla Firefox. A pdf showing the correct rendering of this text is **also shown here**.

The Awami Nastaliq font includes a number of optional features that provide alternative rendering that might be preferable for use in some contexts. The sections below enumerate the details of these features. Whether these features are available to users will depend on both the application and the rendering technology (**Graphite**) being used. This font only supports Graphite.

In Mozilla Firefox, with Graphite rendering, features can be accessed using the appropriate CSS markup. See the **instructions on how to enable Graphite in Firefox**.

Unless otherwise indicated, the first feature in a table is the default.
