Webfont Features Demo

Harmattan is an OpenType and Graphite-enabled font that supports the Arabic script. This page demonstrates the use of .woff fonts (using Harmattan) on a web page. A pdf showing the correct rendering of this test is **also shown here**.

The Harmattan font includes a number of optional features that provide alternative rendering that might be preferable for use in some contexts. The sections below enumerates the details of these features. Whether these features are available to users will depend on both the application and the rendering technology (**Graphite** or OpenType) being used. Most features are available in both Graphite and OpenType, though there may be minor differences in their implementation.

In **Mozilla Firefox**, with either Graphite or OpenType rendering, features can be accessed using the appropriate CSS markup. See the **instructions on how to enable Graphite in Firefox** (the technique described there works for both Graphite and OpenType).

Chrome, **Safari**, and **Edge** use OpenType rendering and features can be accessed using the appropriate CSS markup.

Test rendering engine choice

Here is a simple test to see if Graphite is working in your browser. If it is, the following will say "RenderingGraphite". If your browser does not support Graphite it should say "RenderingOpenType". Firefox is currently the only browser that supports Graphite. See the **instructions on how to enable Graphite in Firefox**.

Check:	RenderingGraphite
